

Group (A) Graduation Project

Global Warming

★ Project Overview

This motion graphics video takes viewers on a simple journey to understand the Greenhouse Effect. First, it shows how it naturally keeps Earth warm enough to live. Then it explains how human activities made it stronger, causing higher temperatures, melting ice, and extreme weather. The story moves from awareness to action, showing how we feel it every day, like hotter summers, stronger storms, and water shortages. It ends with a hopeful message, showing real solutions we can all do: using clean energy, reducing waste, planting trees, and supporting green ideas.

★ Team Members

- Mohamed Adel (Team Leader)
- Ahmed Adel
- Rahma Khaled
- Salsabeel Magdy

★ Project Objectives

- 1- Raise Awareness: Explain the Greenhouse Effect in a clear and fun way so everyone can understand it.
- 2- Show the Impact: Show how this effect has grown stronger over the years and how it affects weather and daily life.
- 3- Promote Action: Encourage people to play their part and use simple ways to cut greenhouse gases.

★ Project Plan

- Week 1 : Drafting the script, and developing the storyboard
- Week 2 : Finalizing the script, and creating the illustrations.
- Week 3 : Recording the voice over and refining the illustrations.
- Week 4 to 6 : Animating the scenes and the characters.
- Week 7 : Making the final edits, then adding the sound effects.

★ Responsibilities
